Topic 1

Human Errors in Data Breaches - Learn to Spot and Mitigate Cyber Threats

In today's interconnected world, the safeguarding of sensitive information is of paramount importance. While advanced cybersecurity measures are crucial, one often-overlooked aspect remains a potent threat: human error. The unintentional actions or lapses of judgment by employees can lead to data breaches, potentially causing significant damage to organisations. Our upcoming webinar, "Human Error in Data Breaches - Learn to Spot Threats," is your gateway to understanding, addressing, and mitigating this critical aspect of cybersecurity.

Join us for an enlightening exploration of the human factor in data breaches and discover how educating employees can be a powerful defence against this pervasive threat.

Date and time: 2 February 2024, 12pm - 12:45pm

Topic 2

How To Protect Yourself Against Scams and Phishing Attacks

In an era where the digital realm is an integral part of our daily lives, scams and phishing attacks have become more sophisticated and prevalent than ever before. From deceptive emails to fraudulent websites, cybercriminals are using cunning tactics to compromise your personal information and financial security.

This webinar aims to empower you with practical strategies and actionable insights to fortify your defences against these cyber threats. We will delve into the anatomy of scams and phishing attacks, dissecting real-world examples to enhance your threat intelligence.
